Human immunodeficiency virus type 1; HIV-1; gp140 envelope protein; second hypervariable region; V2; SF162deltaV2; SF162DV2; AIDS; acquired immunodeficiency syndrome; anti-HIV; mutant; mutein; immunogen.

Immunizing an animal and eliciting an immune response against heterologous HIV-1 in an animal, involves administering an immunogen comprising modified HIV-1 envelope protein, or DNA or virus encoding the protein.

Claim 5; Fig 16; 62pp; English.

The present invention relates to methods for immunising an animal, preferably human, against heterologous human immundeficiency virus type 1 (HIV-1), and eliciting a heterologous immune response to HIV-1 in that animal. The method comprises administering an immunogen having at least

envelope; Env;

modified;

HIV-1; vaccine; anti-HIV; immunogenic; modilied CD4 binding region; VI/V2 loop; bridging sheet. Human immunodeficiency virus 1; isolate SF162.

one modified HIV-1 envelope protein with a deletion in the second modified HIV-1 region or its fragment, or DNA or virus encoding the modified HIV-1 envelope protein. The invention discloses the polymucleotide and amino acid sequences for the full-length HIV-1 explaintent of SF162DV2) gp140 envelope protein, and, for an N-terminal mutant of SF162DV2. The immunogens of the invention are useful for immunishing an animal against heterologous HIV-1 strains by eliciting neutralising antibodies or protective antibodies in the animal. The method can be used to treat acquired immunodeficiency syndrome (AIDS). The present sequence represents the full-length modified HIV-1 SF162DV2 gp140 envelope protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GGKEISNTTEIFRPGGGDMRDNWRSELYKYKVVKIEPLGVAPTKAKRVVQREKRAVTLG

```
Novel immunogenic modified human immunodeficiency virus (HIV) envelope

(Env) polypeptides having an amino acid deleted or replaced in the region

corresponding to residues 420-436 or 119-123 and 199-210 relative to

isolate HXB-2 are disclosed. The modified Env polypeptide is based on HIV

strain SF162, with numbering relative to isolate HXB-2. The Env

carain SF162, with numbering relative to isolate HXB-2. The Env

polypeptides are modified Boo as to expose at least part of the CD4

binding region. The modified HIV Env polypeptides, coding polymucleotides

and constructs, further comprising an adjuvant, are used for inducing an

immune response in an individual. The method involves administering a

first composition comprising a polymucleotide encoding the Env

comprising a modified Env polypeptide as a booster in an amount

comprising a modified Env polypeptide as a booster in an amount

comprising a modified Env polypeptides can be used for a number of

intracellularly produced Env polypeptides can be used for a number of

diagnostic and therapeutic purposes to determine the presence of reactive

antibodies/and or Env proteins in a biological sample to aid in the

cinemunization. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 DTEVHNVWATHACVPTDPNPQEIVLENVTENFNWWKNNWVEQMHEDIISLWDQSLKPCVK 120

preferably human, against hererologous human immunodeficiency virus type 1 (HIV-1), and eliciting a heterologous immune response to HIV-1 in that animal. The method comprises administering an immunogen having at least one modified HIV-1 envelope protein with a deletion in the second hypervariable (V2) region or its fragment, or DNA or virus encoding the modified HIV-1 envelope protein. The invention discloses the polymucleotide and amino acid sequences for the full-length HIV-1 spridged tav2 (SF162DV2) gp140 envelope protein, and, for an N-terminal mutant of SF162DV2. The immunogens of the invention are useful for immunising an animal against heterologous HIV-1 strains by eliciting neutralising antibodies or protective antibodies in the animal. The method can be used to treat acquired immunodeficiency syndrome (AIDS). The present sequence represents the N-terminal mutant (deletion of amino acids 1-27) of modified HIV-1 SF162DV2 gp140 envelope protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 VTENFNAMKONNYVEQMHEDIISLADQSLKPCVKLTPLCVTLHCTNLKOATNTKSSNWKEM

The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Env, Int. Nef, plSRnaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscularly, intranssally, intravaginally, intravectally, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV polypeptides. This sequence represents an HIV Type C related protein of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            410
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New expression cassettes and polynucleotides encoding HIV Gag, Nef, Prot, Tat, Rev, Vif, Vpr, Vpu, or Env polypeptides, useful for DNA immunization or generating an immune response against HIV in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Nef, Prot, Tar, Nev, Vif, Wr, Vpu, or Env polypeptide. The expression cassettes, HIV polypeptides and polynucleotides encoding the HIV polypeptides and polynucleotides encoding the HIV polypeptides and polynucleotides are also useful for generating packaging cell lines or producing the HIV polypeptides. Sequences ABR55684-688 represent env polypeptides from various HIV isolates. (Updated on 23-0CT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PNPQEIVLENVTENFNMWKNNMVEQMHEDIISLWDQSLKPCVKLTPLCVTLHCTNLKNAT 137

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                492
                                                                                                                                                                                                                                                               New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This is the amino acid sequence of a human immunodeficiency virus (HIV) envelope (env) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes expression cassettes comprising a polymucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins The polymucleotides are particularly useful in gene Herapy and DNA immunisation applications. ABL39942 to ABL40054 and ABB06204 to ABB06215 represent sequences used in the exemplification of present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ---KLINCNTS 170

cc gp160 (env gene product) sequence. The invention provides compositions and methods for determining ancestral viral gene sequences and ancestral viral protein sequences for highly diverse viruses, such as HIV-1. The methods use samples of circulating viruses to determine an ancestral viral sequence by maximum likelihood phylogeny analysis. In the present case, the ancestral HIV-1 subtype B env sequence (see AAN26468) was determined using 38 subtype B sequences (obtained from 9 different countries) and 3 subtype D (outgroup) sequences. The distances between this ancestral viral sequence and circulating strains used to determine ti were on average 12.3% (range: 8.0-21.0%) while the available specimens were 17.3% different from each other (range: 13.3-23.2%). Thus, the ancestral force sequence was, on average, more closely related to any given circulating virus than to any other variant. The ancestral gp160 sequence included a wide variety of immunogenically active peptides when processed for antigen presentation; nearly all known subtype B CTL epitope consensus amino acids wer represented Thus, an immunogenic composition to this subtype B ancestor protein will elicit broad neutralising antibody against HIV-1 isolates of the same subtype, and will also elicit a broad cellular response mediated by antigen-specific T-cells. A claimed vaccine composition comprises a viral ancestor protein or its immunogenic fragment, especially one derived from the HIV-1 group M subtype B gp160 ancestral protein. This protein is the gpl20 (envelope glycoprotein) from the GNEB isolate of HIV-1 (human immunodeficiency virus type 1). There are neutralising epitopes in the V2 and C4 domains of gpl20, in addition to the neutralising epitopes in the V3 domain. Although the amino acid sequences of the neutralising epitopes in the V2 v4 and C4 domains are variable, the amount of variation is highly constrained. This facilitates the design of HIV subunit vaccines that can induce antibodies that neutralise the most common HIV strains for a given geographic region. This invention provides a multivalent gpl20 subunit vaccine where the gpl20 present in the vaccine is from at least two HIV isolates which have different amino acid sequences for a neutralising epitope in these regions. The specification describes a method of determining the influence of variation in host genes on selection of microorganisms with protein substitutions. The method comprises typing all individuals of a substitutions. The method comprises typing all individuals of a substitutions. The method is all individuals of a selected intrinsic polymorphic marker involved in the host response to the presence of the microorganism. The method is useful for examining selective pressures confronting a wide range of organisms that exhibit pathogenic traits in a host, such as bacteria, fungi, mycobacterium, ciruse-like particles; for examining microorganisms that have adapted to evolve rapidly, including HIV and AIDS related viruses and the hepatitis related viruses such as HCV and HBV. The method is useful for hepatitis related viruses such as HCV and HBV. The method is useful for cening a vaccine to prevent or delay the emergence of drug resistance in patients treated with a particular drug specific for a microorganism where the drug affects the replication of the microorganism at the cule care amino acid level. The present sequence represents a HIV envelope protein, which is expected to provide optimal cyctoxic T lymphocyte (CTL) induced therapeutic protection to the cohort examined in

                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence is the result of cloning a hybrid envelope gene from HIV variants BH10 and RF. A central portion of the RF gene was used, the rest being from te distantly related variant BH10. The resulting clone, pAcHT6 produces a hybrid gp 160 envelope protein with novel immunological and antigenic characteristics. It may be used to as a vaccine and for diagnosis and therapy of AIDS. 9
nucleotide sequence of ARV-2 derived from partial sequences of several ARV clones. The invention provides a method for construction of a vector for expression of a polypeptide in a mammalian cell, comprising a polypeptide coding sequence operably linked downstream of an enhanced promoter comprises the human cytomegalovirus immediate early region (HCMV IRI) promoter and the first intron proximate to the 3' end of the HCMV IRI promoter. The polypeptide can be any of the HIV recombinant polypeptides and especially HIV gpl20. Expression of HIV gpl20 by COS 7 cells transfected with pCMV6a containing the gpl20 coding region, where pCMV6a is a vector containing the above enhanced promoter, is increased by a factor of 50-100 compared with the use of a vector containing the SV40 early promoter. The immunogenic pol fragment is not immunologically crossreactive with human T cell lymphotropic viruses I or II. The invention also encompasses the used of pil as an antigen. The recombinant antigens may be produced in Escherichia coli, Saccharomyces cerevisiae or in mammalian cells. Immunoassays using the recombinant HIV proteins may be used to diagnose and stage HIV-1 infections. Sequences AAX77299 represent proteins encoded by the genome of HIV-1 (ATCC CRL 8597). (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           181 PIDNASTTINYTNYRLIHCNRSVITQACPKVSFEPIPIHYCTPAGFAILKCNNKTFNGKG 240

```
The invention relates to the improvement of HIV-1 immunoassays by the use of an HIV-1 antigen comprising an immunogenic fragment of recombinant or between a BSTAI antigen comprising an immunogenic fragment of recombinant or between a BSTAI restriction site at position 3006 and an Ndel site at position 5131 of the genome (the proviral DNA sequence is given in AAZ90201). The immunogenic pol fragment is not immunologically cross-reactive with human T cell lymphotropic viruses I or II. The invention also encompasses the used of p31 as an antigen. The recombinant antigens may be produced in Bscherichia coli, Saccharomyces cerevisiae or in mammalian cells. Immunoassays using the recombinant HIV proteins may be used to diagnose and stage HIV-1 infections. Sequences AAY77300-X77302 represent, respectively, the gag, pol and env proteins encoded by the proviral DNA of a single isolate of HIV-1 (ATCC CRL 8597). (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                         DIEVHNVWATHACVPTDPNPQEIVLENVTENFNMWKNNMVEQMHEDIISLWDQSLKPCVK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an immunoassay for detecting the presence of antibodies to a human immunodeficiency virus (HIV) in a sample by: contacting the sample with an HIV gag antigen that binds anti-HIV antibodies in an aquired immunodeficiency syndrome (AIDS) patient sera; and determining binding, where the improvement comprises employing as the gag antigen either a synthetic polypeptide or a recombinant polypeptide. The method is used for detecting the presence of antibodies to a human immunodeficiency virus (HIV) in a human sample. The method is used in the preparation of a medicament for diagnosing, treating or preventing HIV infection e.g. a vaccine or for gene therapy. This is the amino acid sequence, of a retroviral protein isolated from AIDS associated retrovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DTEVHNVWATHACVPTDPNPQEIVLENVTENFNMWKNNMVEQMHEDIISLWDQSLKPCVK 120

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                    US-09-891-609A-2

JOURNEAU INFORMATION OF THE REPENDENT HOYEL James A.

APPLICANT: LABRANCHE, Celia C.

APPLICANT: LABRANCHE, Celia C.

APPLICANT: LONG, ROBERT W.

APPLICANT: HOFFMAN, Trevor L.

TITLE OF INVENTION: CD4-INDEPENDENT HIV ENVELOPE PROTEINS AS VACCINES AND TITLE OF INVENTION: THERAPEUTICS

FILE REFERENCE: HOX: 9596-104U1 (0282)

CURRENT APPLICATION NUMBER: US/09/337,387

PRIOR APPLICATION NUMBER: US/09/337,387

PRIOR PALICATION NUMBER: US/09/337,387

PRIOR PLING DATE: 1999-06-22

PRIOR APPLICATION NUMBER: US 09/317,556

NUMBER OF SEQ ID NOS: 12

SEQ ID NO 3
